# Software Requirements Specification

## 1. Introduction

The Hospital Management Application is a transformative digital solution designed to streamline healthcare processes. With a focus on patient convenience, it offers features such as online appointment scheduling, medical history access, and doctor interaction. For hospital staff, the application provides tools for managing appointments, addressing patient concerns, and monitoring facility information.

### 1.1 Purpose

The purpose of this document is to outline the requirements for the development of a Hospital Management Application. This application aims to streamline various processes within a hospital, including online appointment scheduling, patient management, doctor interaction, hospital reviews, and staff management.

### 1.2 Scope

The Hospital Management Application will provide functionalities for patients, doctors, and hospital staff to manage their respective roles efficiently. It will include features such as online appointment scheduling, access to patient reports and prescriptions, hospital reviews, appointment schedules, and staff management.

### 1.4 Overview

The Hospital Management Application is envisioned as a web-based platform, fostering accessibility and ease of use. It encompasses three key user roles - patients, hospital staff, and administrators - each with tailored functionalities to enhance their respective experiences within the healthcare system.

This document serves as a blueprint, defining the functional and non-functional requirements, constraints, and potential future enhancements for the development team. By adhering to these specifications, the application endeavors to elevate the efficiency and effectiveness of hospital management in the digital age.

## 2. Overall Description

The Hospital Management Application is a web-based platform designed to enhance healthcare services by providing an efficient and user-friendly interface for patients, hospital staff, and administrators. Patients can seamlessly book appointments, access medical records, and engage in brief chats with appointed doctors. Hospital staff benefits from streamlined appointment scheduling, patient complaint management, and facility oversight. Administrators gain insights into hospital performance and patient satisfaction.

## 3. Specific Requirements

The specific requirements are –

### **3.1 Functionality**

#### **1.1 Online Appointment Scheduling:**

- Patients should be able to schedule appointments with specific doctors online.

#### **1.2 Patient Management:**

- Patients can access and manage their medical history, including previous reports and prescriptions.

#### **1.3 Staff Management:**

- Hospital staff, managed by administrators, can oversee facilities, address patient complaints, and ensure service quality.

#### **1.4 Basic Chat:**

- A feature enabling patients to engage in brief, essential chats with appointed doctors for quick questions.

### **3.2 Usability**

#### **2.1 Intuitive User Interface:**

- The user interface should be user-friendly and intuitive for patients, staff, and administrators.

#### **2.2 Accessibility:**

- Ensure the application is accessible to users with different levels of technological proficiency.

### **3.3 Reliability & Availability**

#### **3.1 System Uptime:**

- The system should aim for high availability, minimizing downtime for critical functionalities.

#### **3.2 Data Integrity:**

- Implement measures to ensure the integrity and security of patient data.

### **3.4 Performance**

#### **4.1 Scalability:**

- The application should handle a significant number of concurrent users without degradation in performance.

#### **4.2 Response Time:**

- Ensure that response times for critical functions, such as appointment scheduling, are kept minimal.

### **3.5 Supportability:**

#### **5.1 Documentation:**

- Provide comprehensive documentation for users, administrators, and developers.

#### **5.2 Training:**

- Develop training materials and sessions for hospital staff to efficiently use and manage the application.

### **3.6 Design Constraints:**

#### **6.1 Regulatory Compliance:**

- Adhere to healthcare data protection laws, such as HIPAA and GDPR.

#### **6.2 Compatibility:**

- Ensure compatibility with modern web browsers and devices.

### **3.7 Interfaces:**

#### **7.1. User Interfaces:**

##### **7.1.1 Patient Dashboard:**

- A user-friendly dashboard for patients to manage appointments and access medical records.

##### **7.1.2 Hospital Staff Interface:**

- An interface for staff to manage appointments, facilities, and address patient concerns.

#### **7.2 Hardware Interfaces:**

##### **7.2.1 Device Compatibility:**

- Ensure compatibility with standard devices such as desktops, laptops, and mobile devices.

##### **7.2.1 Integration with Medical Devices:**

- Explore potential integration with medical devices for data input and monitoring.

## **7.3 Software Interfaces:**

### **7.3.1 Electronic Health Records (EHR) Integration:**

- If applicable, integrate with existing EHR systems for seamless data exchange.

### **7.3.2 External APIs:**

- Utilize external APIs for additional functionalities or data sources.

## **7.4 Communications Interfaces:**

### **10.1 Secure Communication:**

- Implement secure communication protocols (HTTPS) to protect sensitive data during transmission.

### **10.2 Notification System:**

- Set up a notification system for appointment confirmations, reminders, and other critical updates.
